

Artificial Intelligence Usage in Academic Work Policy

1. Purpose

Generative artificial intelligence tools (such as ChatGPT, Claude, Gemini, and similar) are increasingly available to students. This policy establishes how students may and may not use these tools in academic work to preserve learning integrity while acknowledging the evolving technological landscape.

2. Default Position

Unless explicitly permitted by the instructor in writing, the use of generative AI tools to produce, draft, or substantially revise academic submissions is prohibited. Submitting AI-generated text as one's own work constitutes academic dishonesty equivalent to plagiarism under ACAD-INT-001.

3. Permitted Uses (When Authorized by Instructor)

- Using AI tools for brainstorming or generating outlines (disclosed in the submission)
- Using AI-powered grammar and spell-check tools (Grammarly, etc.) — always permitted
- Using AI to summarize research sources as a starting point — disclosure required
- AI-generated code used as a starting framework in programming courses — disclosure required

4. Disclosure Requirement

In any course where the instructor has authorized AI use, students must include an AI Use Disclosure statement at the end of their submission describing which tool was used and how it contributed to the work. Failure to disclose authorized AI use still constitutes academic dishonesty.

5. Instructor Responsibilities

Instructors must clearly state in their course syllabus and assignment instructions whether AI use is prohibited, permitted with disclosure, or freely permitted for each assignment. Ambiguous or absent AI use policies default to 'prohibited.'
